Subject: Permit Applications within Portland Harbor Area (Willamette River below mile 14)

Wallace/Chip:

I have enclosed, for your information, copies of four applications that have been received for work within the Portland Harbor area. These particular applications are in the early stages of evaluation. As public notices or coordination letters are issued for these projects, I will make sure that you get copies.

We will not be requiring sediment testing prior to the issuance of a public notice for a dredging project. However, we will require that testing be completed as part of our evaluation process. Sampling plans will be coordinated with John Malek, as part of the DMMT, and others as required by the Dredged Material Evaluation Framework.

If you have questions, you may contact me at (503) 808-4382 or by email at [judy.l.linton@usace.army.mil](mailto:judy.l.linton@usace.army.mil).

Our public notices are now sent by email but can also be sent by mail. If you have a preference let me know.

Thanks.....Judy
